

Flanges and their joints — Circular flanges for pipes, valves, fittings and accessories, PN designated —

Part 3: Copper alloy flanges

ICS 23.040.60

National foreword

This British Standard is the UK implementation of EN 1092-3:2003, incorporating corrigenda July 2004 and August 2007. It supersedes BS 4504-3.3:1989 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee PSE/15, Flanges.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard, was published under the authority of the Standards Policy and Strategy Committee on 8 March 2004

Amendments/corrigenda issued since publication

English version

Flanges and their joints - Circular flanges for pipes, valves,
fittings and accessories, PN designated - Part 3: Copper alloy
flanges

Brides et leurs assemblages - Brides circulaires pour tubes,
appareils de robinetterie, raccords et accessoires,
désignées PN - Partie 3: Brides en alliages de cuivre

Flansche und ihre Verbindungen - Runde Flansche für
Rohre, Armaturen, Formstücke und Zubehörteile, nach PN
bezeichnet - Teil 3: Flansche aus Kupferlegierungen

This European Standard was approved by CEN on 27 June 2003.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

Due to the incorrect hatching, all figures were replaced.

This document (EN 1092-3:2003) has been prepared by Technical Committee CEN/TC 74 "Flanges and their joints" the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by March 2004, and conflicting national standards shall be withdrawn at the latest by March 2004.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of the Pressure Equipment Directive (PED)¹⁾.

For relationship with EU Directive(s), see informative annex ZA, which is an integral part of this standard.

EN 1092 consists of the following parts:

- Part 1: Steel flanges;
- Part 2: Cast iron flanges;
- Part 3: Copper alloy flanges;
- Part 4: Aluminium alloy flanges.

The annexes A, B, C and ZA are informative.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and the United Kingdom.

Introduction

This standard is related to ISO 7005-3 in respect of flanges having the same PN. The types of flanges and their mating dimensions are identical with those flanges of the same DN and PN given in ISO 7005-3, except that certain flange types in accordance with this standard may regularly be supplied with raised face facings.

The mating dimensions of the flanges of this standard are compatible with PN designated flanges of other materials in accordance with the other parts of EN 1092.

¹⁾ Directive 97/23 EC of the European Parliament and of the Council of 29 May 1997 on the approximation of the Laws of the Member States concerning pressure equipment; OIEC L 181.

1 Scope

This European Standard specifies requirements for circular copper alloy flanges and copper alloy collars combined with loose steel plate flanges in PN designations from PN 6 to PN 40 and nominal sizes from DN 10 to DN 1800 in the types shown in Table 1.

This standard also specifies dimensions and tolerances, materials and their associated pressure/temperature (p/T) ratings, flange facings and related surface finish, weld repairs, and marking, together with information on bolting, gaskets, application/installation and approximate flange masses.

The flanges specified, with the exception of integral (type 21) flanges, are for attachment to copper or copper alloy tubes in accordance with EN 12449.

NOTE 1 When the flanges specified in this standard are required for use with copper or copper alloy tubes to EN 1057 in those tube diameters which are different to EN 12449, this should be agreed between the equipment manufacturer and the flange manufacturer.

NOTE 2 The size of copper and copper alloy tubes is designated by reference to the outside diameter in millimetres.

NOTE 3 See also annex B.

NOTE 4 Non-gasketed pipe joints are outside the scope of this standard.

Table 1 — Types of flanges and collars

Type no.	Description
01	Plate flange in copper alloy for brazing or welding
02	Loose plate flange in steel with a plate collar (type 32) in copper alloy, for brazing or welding.
04	Loose plate flange in steel with a weld-neck collar (type 34) in copper alloy, for welding.
05	Blank flange in copper alloy.
05C	Blank flange in steel clad with a copper alloy jointing face.
07	Loose plate flange in steel with a slip-on collar (type 37) in copper alloy, for soft soldering, brazing or welding.
11	Weld-neck flange in copper alloy for welding.
12	Hubbed slip-on flange in copper alloy, for soft soldering, brazing or welding.
14	Hubbed slip-on flange in copper alloy supplied with tube stops, for soft soldering, brazing or welding.
21	Integral flange in copper alloy as part of some other equipment or component
32	Plate collar in copper alloy
34	Weld-neck collar in copper alloy.
37	Slip-on collar in copper alloy.

Copper alloy component

Steel component

Type 01
Plate flange in copper alloy
for brazing or welding

Type 02, 32
Loose plate flange in steel with a
plate collar (type 32) in copper alloy
for brazing and welding

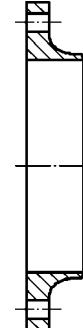

Type 04, 34
Loose plate flange in steel with a
weld-neck collar (type 34) in copper
alloy for welding

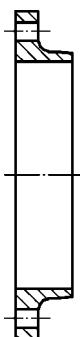

Type 05, 05C
05 Blank flange in copper alloy
05C Blank flange in steel clad with
a copper alloy jointing face

Type 07, 37
Loose plate flange in steel with a
slip-on collar (type 37) in copper
alloy, for soft soldering, brazing or
welding

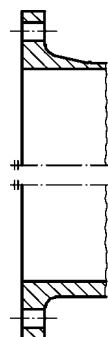

Type 11
Weld-neck flange in copper alloy for
welding

Type 12
Hubbed slip-on flange in copper
alloy, for soft soldering, brazing or
welding

Type 14
Hubbed slip-on flange in copper
alloy supplied with tube stops, for
soft soldering, brazing or welding

Type 21
Integral flange in copper alloy as
part of some other equipment or
component

EN ISO 6708:1995, *Pipework components — Definition and selection of DN (nominal size) (ISO 6708:1995)*.

3 Terms and definitions

For the purposes of this standard, the following terms and definitions apply.

3.1

DN

see EN ISO 6708:1995

3.2

PN

see EN 1333:1996

3.3

maximum allowable pressure, PS

means the maximum allowable pressure for which the equipment is designed, as specified by the equipment manufacturer

3.4

maximum allowable temperature, TS

means the maximum allowable temperature for which the equipment is designed, as specified by the equipment manufacturer

4 Designation

4.1 General

The types of flanges and their reference numbers are given in Table 1 and the range of DN applicable to each flange type and to each PN shall be as given in Table 3.

4.2 Standard designation

Flanges and collars in accordance with this standard shall be designated by the following:

- a) Designation, e.g. flange or collar;
- b) Number of this standard, EN 1092-3;
- c) Number of flange type in accordance with Figure 1;
- d) Type of flange facing, A or B in accordance with Figure 1 (only for types 11, 12, 14 and 21);
- e) PN designation, PN....;
- f) Nominal size, DN....;
- g) Bore diameter B_1 (only for flanges which can be made to suit more than one tube diameter — see Tables 5 to 9);
- h) Material number or symbol (see Tables 11 and 12) (for type 05C flanges it is necessary to specify both the material of the flange and the material of the cladding).

EXAMPLE 1 Designation of a plate flange type 01 with facing type A, in PN 6 and nominal size DN 800 and in material symbol CuAl8Fe3:

Flange EN 1092-3/01A/PN 6/DN 800/CW303G

EXAMPLE 2 Designation of a loose flange type 07, in PN 10 and nominal size DN 50 and in material symbol S235JR:

Flange EN 1092-3/07/PN 10/DN 50/S235JR

EXAMPLE 3 Designation of slip-on collar type 37, in PN 10 and nominal size DN 50 with bore diameter $B_1 = 57,23$ and in material symbol CuZn20Al2As:

Collar EN 1092-3/37/PN 10/DN 50/57,23/CW702R

EXAMPLE 4 Designation of a blank flange type 05C with clad jointing face, in PN 25 and nominal size DN 150 and in materials symbols S235JR (for blank flange) and CuNi30Mn1Fe (for cladding):

Flange EN 1092-3/05C/PN 25/DN 150/S235JR-CW354H

EXAMPLE 5 Designation of a weld-neck flange type 11 with facing type B, in PN 16 and nominal size DN 100 and in material symbol CuAl10Fe2-C:

Flange EN 1092-3/11B/PN 16/DN 100/CC331G

4.3 Information to be supplied by the equipment manufacturer

For information to be supplied by the equipment manufacturer see annex A.

5 General requirements

5.1 Materials

Flanges and collars shall be manufactured from the materials specified in Tables 11 and 12 except for type 21 flanges where the flange manufacturer may use other materials by agreement with the equipment manufacturer.

The flange manufacturer shall provide means of identifying the material of the flange. An equipment manufacturer may require a certificate in accordance with EN 10204 which is suitable for the category of the equipment to which the flange is fitted.

NOTE If a protective coating such as zinc coating or zinc painting is required on steel components, the equipment manufacturer should state this on the enquiry and/or order.

5.2 Repairs

5.2.1 Repairs by welding are permitted when there is a proven method and where not otherwise prohibited by the applicable material standard. All welding shall be carried out in accordance with a written procedure.

NOTE For approval of welding procedures, see EN 288-1. For approval of welders, see EN 287-1.

5.2.2 Any filler rod used for weld repairs shall be such as to produce a weld having characteristics at least equal to the parent metal. Flanges shall be heat treated after repair welding when the material standard requires such treatment.

5.3 Bolting

Flanges shall be suitable for use with the nominal size and number of bolts specified in Tables 5 to 9 as appropriate.

The bolting material shall be chosen by the equipment manufacturer according to the pressure, temperature, flange material and the selected gasket so that the flanged joint remains tight under the expected operating conditions.

NOTE 1 For information on bolting, see EN 1515-1 and EN 1515-2 and annex B.

NOTE 2 For flange types 01, 05, 11, 12, 14 and 21, where copper alloy bolting is used, the recommended bolting materials are EN 12420 Alloy Nos. CW306G or CW307G for temperatures up to and including 120 °C.

For flange types 02, 04, 05C and 07, steel bolting should be used and reference should be made to EN 1515.

5.4 Gaskets

The various gasket types, dimensions, design characteristics and materials used are not within the scope of this standard. Dimensions of gaskets are given in the relevant parts of EN 1514.

5.5 Pressure/temperature (p/T) ratings

5.5.1 General

The p/T ratings of the flanges manufactured from the materials specified in Tables 11 and 12 are given in Tables 13 and 14.

The p/T ratings indicate the relationship between the maximum allowable pressure, PS and the maximum allowable temperature, TS.

Linear interpolation is permitted for intermediate temperatures.

NOTE 1 See EN 764 for terminology.

NOTE 2 When type 21 flanges are supplied as part of another component (for example, a valve or pump) in a material other than those listed in Table 11, reference should be made to the relevant product or application standard for the appropriate p/T ratings.

NOTE 3 The rating of a flange is not necessarily the rating of the whole pipework system. Gasket materials can also impose limitation of the p/T rating of a flanged joint and the gasket manufacturer should be consulted when selecting the material of the gasket.

5.5.2 p/T ratings of flanged joints

When two flanges in a flanged joint do not have the same p/T rating at any temperature, then the lower of the two flange p/T ratings at that temperature shall apply.

NOTE 1 For any p/T rating, the temperature shown is considered to be the same as that of the contained fluid. Use at a pressure corresponding to a temperature other than that of the contained fluid is the responsibility of the user.

NOTE 2 Application of the p/T ratings given in this standard to flange joints should take into consideration the risks of leakage due to forces and moments developed in the connecting pipework, see annex B.

NOTE 3 These notes on service considerations are not intended to be exhaustive.

5.6 Dimensions

5.6.1 Flanges

Dimensions of flanges shall be in accordance with Figure 2 and the following tables and figures as appropriate:

- PN 6 flanges: Table 5 and Figure 3;
- PN 10 flanges: Table 6 and Figure 4;
- PN 16 flanges: Table 7 and Figure 5;
- PN 25 flanges: Table 8 and Figure 6;
- PN 40 flanges: Table 9 and Figure 7.

NOTE 1 The bore sizes of type 21 flanges are usually equal to the nominal size of the pipe, valve or fitting of which they form a part and the actual bore sizes are usually given in the appropriate standard(s) for the pipe, valve or fitting.

NOTE 2 When type 07, 12 and 14 flanges are for use with soft soldering techniques only, then reference should be made to EN 1254-1 for socket depths.

NOTE 3 For types 34 and 11 flanges the recommended weld preparation angle is $37,5^\circ \pm 2,5^\circ$ when butt welding to pipe with thickness of 3 mm and greater.

5.6.2 Bolt holes

Bolt holes shall be equally spaced on the pitch circle diameter. In the case of type 21 flanges, the bolt holes shall be positioned such that they are symmetrical to the principle axes and such that no holes fall on these axes, i.e. positioned "off-centre", see Figures 3 to 7.

5.7 Flange facings

5.7.1 Types of facings

Figure 2 illustrates facing types (types A and B) which are used, where applicable, in conjunction with the flanges shown in Figure 1. Diameters of type B raised faces are given in Table 4.

Types 01 and 05 flanges in copper alloy shall be provided with type A flat face. Types 11, 12, 14 and 21 flanges in copper alloy shall be provided with either type A flat face or type B raised face.

NOTE 1 Flanges with type A facings are suitable for bolting to flat face mating flanges using a full face gasket. Flanges with type B facings are suitable for bolting to raised face mating flanges and/or used with inside bolt circle gaskets.

NOTE 2 For types 11, 12, 14 and 21 flanges, the equipment manufacturer's enquiry or order should advise the flange manufacturer of the facing type required, see annex A.

NOTE 3 For certain large size flanges in types 11, 12 and 14 and PN 6 to PN 25 (see Tables 5 to 8), type B facings only are specified. The provision of type A facings on these flanges would be by agreement between the flange manufacturer and equipment manufacturer.

Types 02, 04, 05C and 07 flanges have a raised face formed by the face of the collar or the cladding, for bolting to raised face mating flanges using an inside bolt circle gasket.

NOTE 4 The bolting of these flanges to a flat face iron or steel mating flange using full face or inside bolt circle gaskets is not precluded.

5.7.2 Jointing face finish

All flange jointing faces shall be machine finished and when compared by visual or tactile means with reference specimens, shall be in accordance with Table 2.

NOTE 1 It is not intended that instrument measurements are taken on the flange faces, and the R_a and R_z values as defined in ISO 468 relate to the reference specimens.

NOTE 2 Other finishes may be agreed between the flange manufacturer and equipment manufacturer.

Table 2 — Surface finish of jointing faces

Method of machining	R_a^a μm		R_z^a μm	
	min.	max.	min.	max.
Turning ^b	3,2	12,5	12,5	50m
^a R_a and R_z are defined in EN ISO 4287				
^b Turning covers any method of machining operation producing either serrated concentric or serrated spiral grooves.				
Machining processes other than turning are permissible provided that they give a surface finish in accordance with the R_a and R_z values specified.				

5.7.3 Rims

Rims of flanges and collars may be machined or un-machined.

5.7.4 Collars and loose flanges

Collars and loose flanges shall be machine finished, or have a surface equivalent to that obtained by machining on all locating diameters, bores and abutment faces. The abutment faces shall be flat and square to the bore axis.

5.8 Spot facing or back facing

Any spot facing or back facing required shall not reduce the flange thickness to less than the minimum specified.

When spot facing is used, the diameter shall be large enough to accommodate the outside diameter of the equivalent normal series of washers in accordance with EN ISO 887 for the bolt size being fitted.

When a flange is back faced, it is permissible for the fillet radius to be reduced but it shall not be eliminated entirely. The bearing surfaces for the bolting shall be parallel to the flange jointing face within the limits given in Table 10.

5.9 Tolerances

Tolerances on dimensions shall be as specified in Table 10.

5.10 Marking

5.10.1 Other than type 21 flanges

All flanges and collars shall be marked as follows:

- a) Number of this standard, i.e. EN 1092-3;
- b) Flange or collar type number, e.g. 05;
- c) PN designation, e.g. PN 10;
- d) DN (Nominal size), e.g. DN 100. Where a flange or collar can be made to suit more than one tube size, the tube size shall be marked as appropriate (see Tables 5 to 9);
- e) Material designation. The alloy designation number given in Tables 11 and 12 shall be used, as appropriate;
- f) Flange manufacturer's name or trademark.

EXAMPLE 1 Copper alloy flanges:

EN 1092-3 - 12 — PN 16 — DN 300 — CW352H — XYZ

EXAMPLE 2 Copper alloy collars:

EN 1092-3 — 32 — PN 16 — DN 50/54 — CC491K — XYZ

EXAMPLE 3 Steel components:

EN 1092-3 — 02 — PN 16 — DN 300 — S235JR — XYZ

5.10.2 Method of markings

Copper alloy flanges shall be clearly and permanently marked by a method other than stamping with steel stamps.

NOTE 1 The flange manufacturer's name or trademark, together with other relevant markings may be produced during casting or forging for both copper alloy and steel components.

NOTE 2 Steel flanges may be marked round the rim of the flange with round nosed steel stamps.

5.10.3 Omission of markings

If a flange is too small to enable all the markings required in 5.10.1 to be marked on the flange, then some of the markings are permitted to be omitted. The order in which the markings are omitted shall be as follows:

- a) Flange type number;
- b) DN.

5.10.4 Declaration of compliance

The marking EN 1092-3, together with the flange manufacturer's name or trademark on or in relation to a product, represents a manufacturer's declaration of compliance, i.e. a claim by or on behalf of the manufacturer that the product meets the requirements of this standard.

Table 3 — Synoptic table for flanges

Note The range of DN of which a flange of a particular type and PN may be ordered to this standard is denoted by •

Type A Flat face

Type B Raised face

NOTE 1 For application, see 5.7.1.

NOTE 2 For dimensions of type B facings, see Table 4.

NOTE 1 For type 12 and type 14 flanges of all DN, $\alpha = 4^\circ$ max.

NOTE 2 For dimensions d_1 and f_1 : see Table 4.

^a Dimension E is given for information only.

Type 05, 05C

NOTE 1 For type 12 and 14 flanges, all nominal sizes, $\alpha = 4^\circ$ max.

NOTE 2 Dimension N_3 is measured at the intersection of the projections of the hub draft angle and the back face of the flange.

Figure 4 — Dimensions of PN 10 flanges (see Table 6)

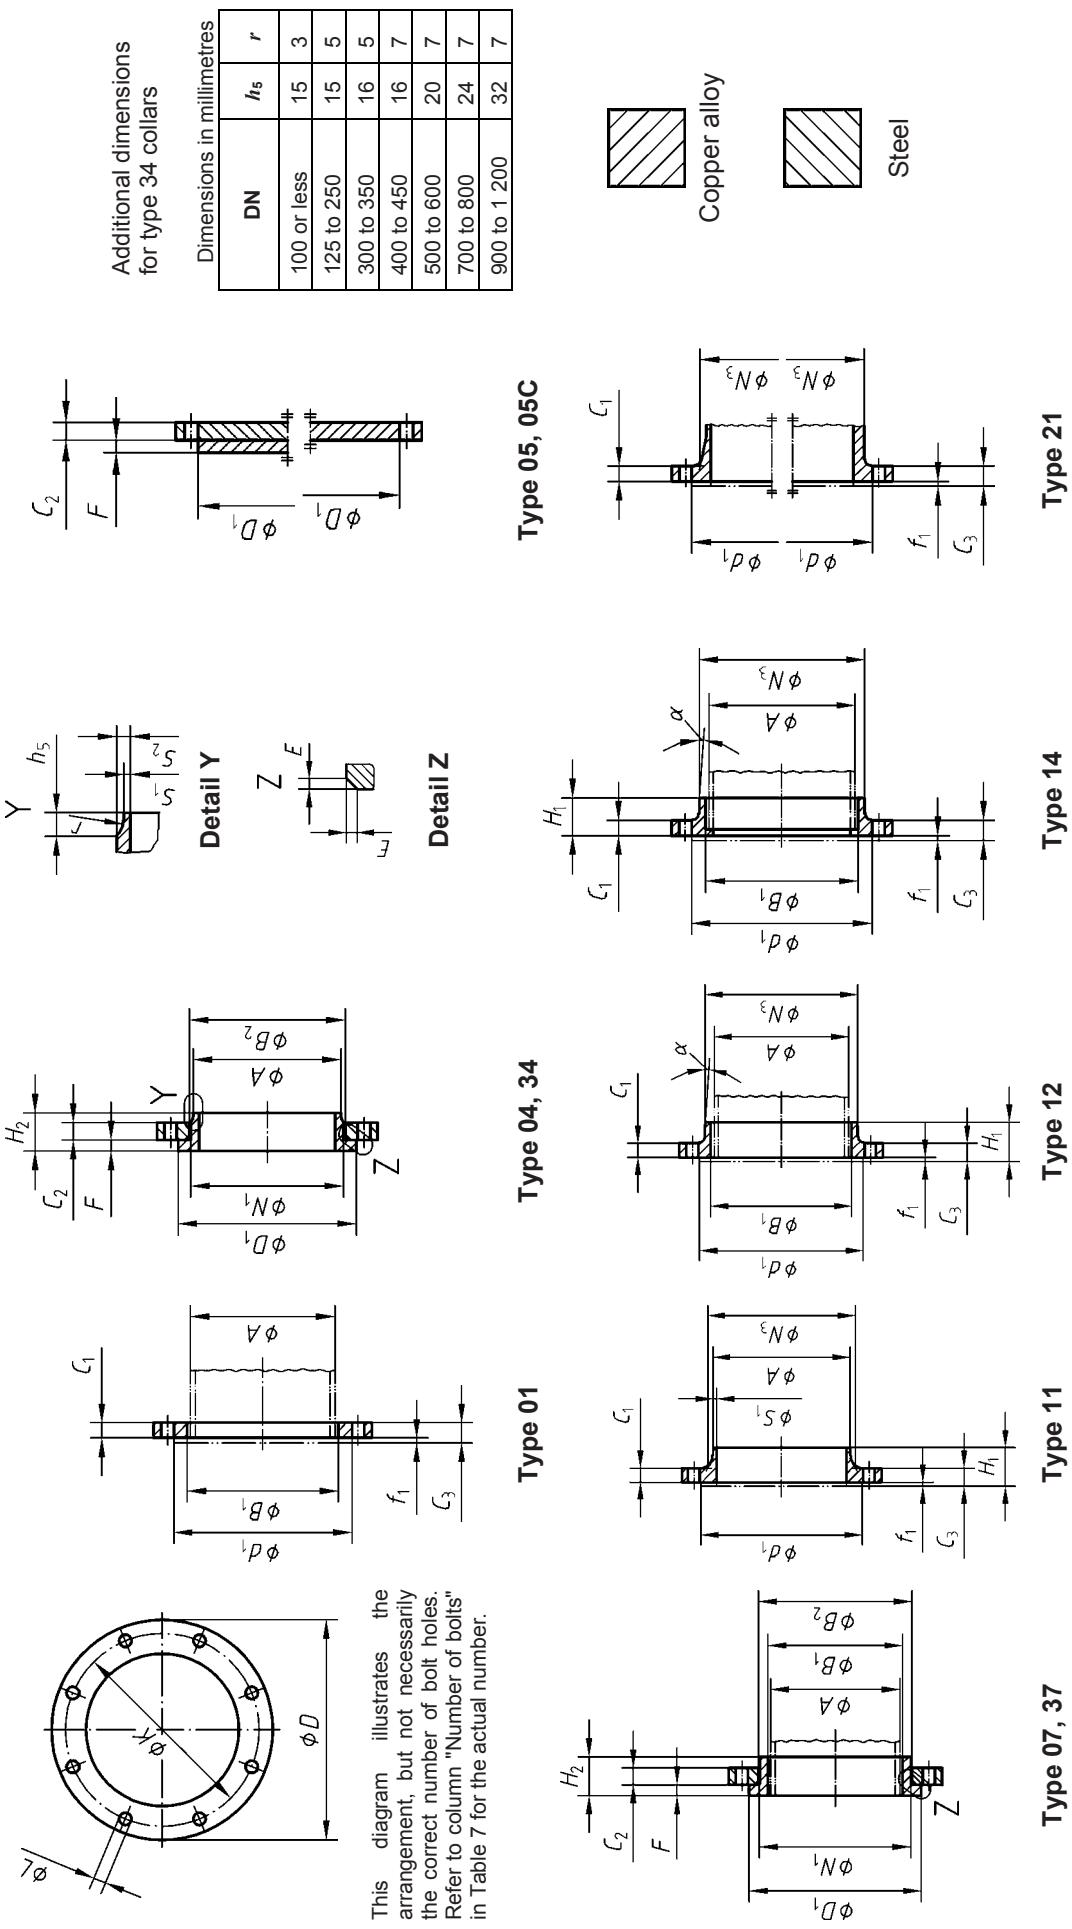

Table 6 — Dimensions of PN 10 flanges (see Figure 4)

NOTE 1 For type 12 and type 14 flanges of all DN, $\alpha = 4^\circ$ max.

NOTE 2 For dimensions d_1 and f_1 , see Table 4.

^a Dimension E is given for information only.

NOTE 1 For type 12 and 14 flanges, all nominal sizes, $\alpha = 4^\circ$ max.
NOTE 2 Dimension N_3 is measured at the intersection of the projections of the hub draft angle and the back face of the flange.

Figure 5 — Dimensions of PN 16 flanges (see Table 7)

Table 7 — Dimensions of PN 16 flanges (see Figure 5)

NOTE 1 For type 12 and type 14 flanges of all DN, $\alpha = 4^\circ$ max.

NOTE 2 For dimensions d_1 and f_1 see Table 4.

^a Dimension E is given only for information.

^b According to EN 1092-1, steel flanges in this DN and PN may be supplied with 8 holes. For compliance with these, equivalent copper alloy flanges may be supplied with 8 holes, as a special order and after agreement between flange manufacturer and equipment manufacturer.

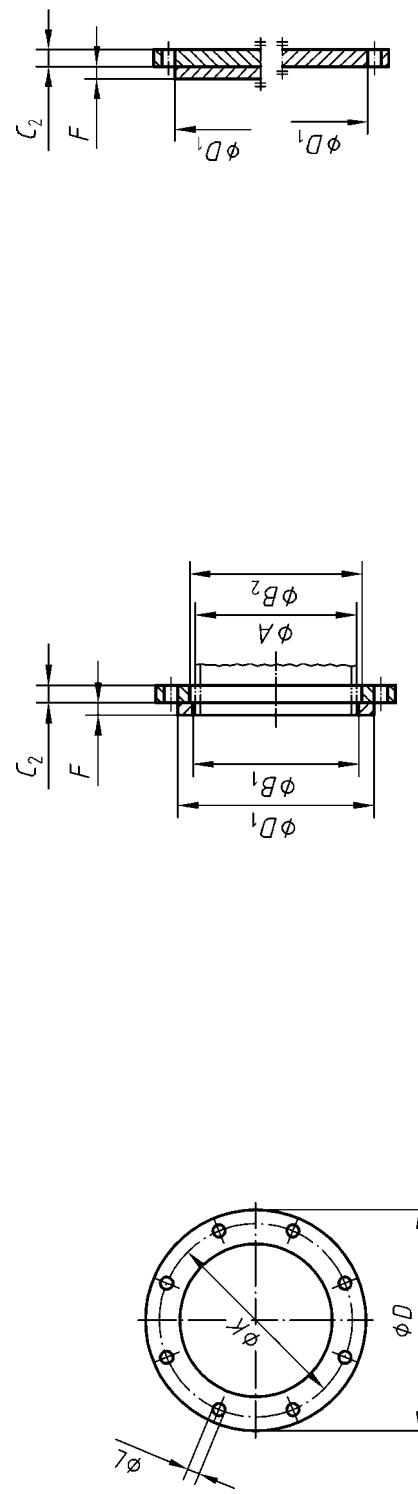

Table 8 — Dimensions of PN 25 flanges (see Figure 6)

Dimensions in millimetres																									
DN	Tube outside diameter of flange	Pitch circle diameter of flange	Bolt hole diameter	Mating dimensions		Flange thickness		Lose and blank flanges	Type A facing	Type B facing	Hub diameter	Nck diameter (min.)	Collar diameter	Length through hub or collar	Collar flange thickness	Bore of flange or collar	Bore of flange	Chamfer

NOTE 1 For type 12 and type 14 flanges of all DN, $\alpha = 4^\circ$ max.

NOTE 2 For dimensions d_1 and f_1 : see Table 4.

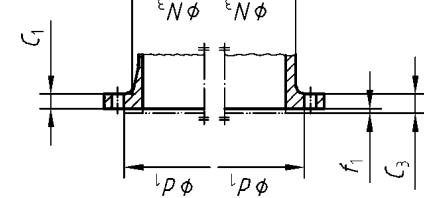

a Dimension E is given for information only.

Type 05, 05C

Type 02, 32

This diagram illustrates the arrangement, but not necessarily the correct number of bolt holes. Refer to column "Number of bolts" in Table 9 for the actual number.

Type 21

NOTE Dimensions N_3 is measured at the intersection of the projections of the hub draft angle and the back face of the flange.

Figure 7 — Dimensions of PN 40 flanges (see Table 9)

Table 9 — Dimensions of PN 40 flanges (see Figure 7)

<i>F</i>	Facing height	32		± 0,5			± 1																		
		34		± 0,5			± 1												± 1,5						
		05C			± 0,3														± 0,6						
		37	+ 1 0		+ 2 0					+ 3 0									+ 3 0						

Table 10 — Tolerances (continued)

Symbol	Feature	Flange type	Tolerances			
K	Pitch circle diameter ^c	All types	M10 to M24 ± 0,9	M27 to M45 ± 1,4		
	Centre to centre ^c	All types	M10 to M24 ± 0,45	M27 to M45 ± 0,7		
	Concentricity ^b	As given	≤ DN 100 1	> DN 100 2		
L	Bolt hole diameter	All types	≤ 20 + 0,8	≥ 22 + 1,3		
<i>d</i> ₁	Raised face diameter	11, 12, 14, 21	≤ DN 250 + 2 - 1	> DN 250 + 3 - 1		
<i>f</i> ₁	Raised face height	11,12,14, 21	DN 10 to DN 1 800 0 - 1			
Bolt bearing surfaces shall be parallel to the flange jointing face as follows: machined face: 1° un-machined face: 2°						
NOTE Miscellaneous radii should be regarded as maximum unless otherwise specified.						
^a The wider tolerances for DN 250 to DN 500, types 01, 02, 07 and 12 flanges, are intended for attachment by fusion welding. ^b Concentricity given, is between K and any machined diameter. The tolerance does not apply if a suitable machined diameter does not exist. ^c Tolerances on the pitch circle diameter and centre-to-centre of adjacent bolt holes are based on the differences between the bolt and the bolt hole diameter and thus, in conjunction, cannot exceed the clearance together with any tolerance on the diameter of the bolt hole.						

Table 11 — Copper alloy materials

Copper alloy material				Flange or collar types ^c								
Product form	Standard	Alloy designation		12, 14, 37	01, 12, 14, 32, 37	01, 11, 12, 14, 32, 34, 37	05	05C	21			
		Method of attachment										
		Symbol	Number	Soft solder (slip-on) ^a	Silver brazing (slip-on)	Fusion welding (slip-on)						
Casting	EN 1982	CuSn5Pb5Zn5-C	CC491K	•	•	—	•	—	•			
		CuSn7Pb3Zn2-C	CC492K	•	•	—	•	—	•			
		CuSn6Zn4Pb2-C	CC498K	•	•	—	•	—	•			
		CuAl10Fe2-C	CC331G	—	—	•	—	—	•			
		CuAl10Ni5Fe5-C	CC333G	—	—	•	—	—	•			
Forging or plate	EN 12420 EN 1652	CuZn20Al2As	CW702R	—	•	•	•	•	—			
		CuAl8Fe3	CW303G	—	—	•	•	•	—			
		CuAl10Fe3Mn2	CW306G	—	—	•	•	•	—			
		CuAl10Ni5Fe4	CW307G	—	—	•	•	•	—			
		CuNi10Fe1Mn	CW352H	—	•	• ^b	•	•	—			
		CuNi30Mn1Fe	CW354H	—	•	•	•	•	—			

^a Applicable to attachment to copper tubes to EN 12449 and appropriate to sizes DN 50 and smaller.

^b For certain seawater applications it is common practice to use the alloy CuNi10Fe1,6Mn for type 34 collars.

^c The symbol • indicates the common material/flange type combinations.

Table 12 — Steel grades

Steel grade			Flange types ^b
Product form	Standard	Designation	02, 04, 05C, 07
Plate	EN 10028-2	P265GH	•
	EN 10028-2	P295GH	•
Forging	EN 10222-2	P245GH ^a	•

^a For the purposes of this standard, steel in accordance with ASTM-A105 has material properties not inferior to P245GH and is therefore fully suitable for flange applications.

^b The symbol • indicates the common material/flange type combinations.

Table 13 — Pressure/temperature ratings for general application ^{a, b, e, f}

PN	Maximum allowable temperature, TS in °C						
	-10 to 120 ^c	150	180	200 ^d	220	250	260
	Maximum allowable pressure, PS in bar ^g						
6	6,0	6,0	6,0	5,0	4,0	2,5	2,0
10	10,0	10,0	10,0	8,5	7,0	5,0	4,0
16	16,0	16,0	16,0	13,5	11,3	8,0	7,0
25	25,0	25,0	25,0	21,2	17,5	12,2	10,5
40	40,0	38,5	34,0	30,0	25,5	19,5	17,5

^a Ratings have been adopted from ISO 7005-3: 1988, Table 10.

^b Ratings are for flanges/collars manufactured in the materials listed in Tables 11 and 12, except for alloy numbers CC333G and CW354H (see Table 14).

^c Flanges/collars larger than DN 250 in all types and all PN ratings are limited to a maximum allowable temperature of 120 °C.

^d Flanges/collars in types 01, 12, 14, 32 and 37 in all PN and all sizes, when used in conjunction with copper tubes to prEN 133/08 and attached by silver brazing, shall be limited to a maximum allowable temperature of 200 °C.

^e Flanges/collars in types 12, 14 and 37 and in ratings PN 6 to PN 25 inclusive and in sizes DN 50 and smaller, when used in conjunction with copper tubes to EN 12449 and attached by soft solder, shall be limited to the following maximum allowable temperatures and/or pressures:

6 bar at 110 °C;
10 bar at 66 °C;
16 bar at 30 °C.

^f Flanges/collars in types 01, 12, 14, 32 and 37 in all PN and all sizes, when used in conjunction with copper tubes to prEN 133/08 and attached by silver brazing, are limited to a maximum allowable temperature of 200 °C.

^g 1 bar = 100 kPa.

Table 14 — Pressure/temperature ratings for alloy types CC333G and CW354H ^{a, c}

PN	Maximum allowable temperature, TS in °C										
	-10 to 120 ^b	150	180	200	220	250	260	280	300	320	350
	Maximum allowable pressure, PS in bar ^d										
6	6,0	6,0	6,0	5,5	5,0	4,5	4,0	3,5	3,0	2,5	2,0
10	10,0	10,0	10,0	9,5	8,5	7,5	7,0	6,5	6,0	5,0	4,0
16	16,0	16,0	16,0	15,0	14,0	13,0	12,0	11,0	10,0	8,5	7,0
25	25,0	25,0	25,0	24,0	22,0	19,0	18,5	16,5	14,5	13,0	10,5
40	40,0	38,5	35,5	33,5	31,0	28,0	26,5	24,5	22,5	20,5	17,5

^a Ratings have been adopted from ISO 7005-3: 1988, Table 10a.
^b Flanges/collars larger than DN 250 in all types and all PN are limited to a maximum allowable temperature of 120 °C.
^c Flanges/collars in types 01, 12, 14, 32 and 37 in all PN and all sizes, when used in conjunction with copper tubes to EN 12449 and attached by silver brazing, shall be limited to a maximum allowable temperature of 200 °C.
^d 1 bar = 100 kPa.

Annex A
(informative)

Information to be supplied by the equipment manufacturer

In addition to the standard designation specified in 4.2, the following additional information should be supplied by the equipment manufacturer in the enquiry and/or order, where appropriate:

- a) whether loose plate flanges in steel (type 02, 04 or 07) and blank flanges in steel (type 05C) are required to have any protective coating (e.g. zinc coating, painting), subject to agreement between the equipment manufacturer and flange manufacturer (see 5.1);
- b) whether types 07, 12 and 14 flanges are for use with soft soldering techniques (see 5.6.1);
- c) whether flanges are to be supplied un-drilled, or drilled to non-standard requirements (see 5.6.2);
- d) the facing type required for types 11, 12, 14 and 21 flanges (see 5.7.1);
- e) whether surface finish is required different from that specified in 5.7.2;
- f) whether flange rims are to be machined or un-machined (see 5.7.3).

Annex B (informative)

Application and installation

B.1 When using bolting materials other than copper alloy the equipment manufacturer should take into account the pressure, flange material and the related gasket so that the joint remains tight under the expected operating conditions.

B.2 Application of the p/T ratings to flanged joints at either high or low temperature should consider the effect of the risk of leakage due to forces and movement developed in the connecting pipes.

B.3 Flanges may be required to be pressure tested after attachment of a pipe or other equipment or when forming an integral part of such equipment. The test pressure is then dependent on the requirements of the appropriate standard or code of practice in accordance with which the equipment has been fabricated or manufactured. Any test pressure should not exceed 1.5 times the allowable pressure at 20 °C, rounded up to the next whole bar increment.

Annex C (informative)

Approximate masses of flanges and collars

Tables C.1 to C.5 give calculated masses of flanges and collars, which may be used for guidance only.

These calculated masses are based on nominal dimensions given in Tables 5 to 9 and on densities of 8,90 g/cm³ for copper alloy materials and 7,80 g/cm³ for steel materials.

The equipment manufacturer should consult the flange manufacturer to obtain actual masses, which may vary from the calculated masses due to dimensional variations within the permitted tolerances given in Table 10.

Table C.1 — Masses of PN 6 flanges and collars

DN	Mass (kg)												
	Type												
	01	05	11	14	34	04	34/04	05C	05C	05C	37	07	37/07

(informative)

Relationship between this European Standard and the Essential Requirements of EU Directive 97/23/EC

This European standard has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association (EFTA) to provide a means of conforming to Essential Requirements of the New Approach Directive 97/23/EC (Pressure Equipment Directive, PED).

Once this standard is cited in the Official Journal of the European Communities under that Directive and has been implemented as a national standard in at least one Member State, compliance with the clauses of this standard given in table ZA confers, within the limits of the scope of this standard, a presumption of conformity with the corresponding Essential Requirements of that Directive and associated EFTA regulations.

Table ZA — Correspondence between this European Standard and Directive 97/23/EC

Clause(s)/sub-clause(s) of this EN	Essential requirements (ERs) of Directive 97/23/EC	Qualifying remarks/Notes
5.1	Materials: Materials for pressure equipment to be suitable during lifetime.	4
	Materials for pressurised parts to have appropriate properties for all operating and test conditions: — to be sufficiently ductile and tough.	4.1 (a)
5.5	Design	2
	To be designed to ensure safety throughout intended life — to incorporate appropriate safety coefficients.	2.1
	To be designed for adequate strength.	2.2
	To be designed for loadings appropriate to its intended use.	2.2.1
	To be designed for appropriate strength based on a calculation method.	2.2.2
	Requirements to be met by applying one of the following methods — design by formula.	2.2.3 (a)
	Design calculations to establish the resistance of equipment, in particular: — account to be taken of combinations of temperature and pressure; — maximum stresses and peak stresses to be within safe limits.	2.2.3 (b)
5.1 5.10.1 (f)	Traceability Identification of the material making up the component.	3.1.5

WARNING: Other requirements and other EU Directives may be applicable to the product(s) falling within the scope of this standard.

Bibliography

EN 287-1, *Approval testing of welders — Fusion welding — Part 1: Steels*

EN 288-1, *Specification and qualification of welding procedures for metallic materials — Part 1: General rules for fusion welding*

EN 764, *Pressure equipment — Terminology and symbols — Pressure, temperature and volume*

EN 1057, *Copper and copper alloys — Seamless round copper tubes for water and gas in sanitary and heating applications*

EN 1254-1, *Copper and copper alloys — Plumbing fittings — Part 1: Fittings with ends for capillary soldering or capillary brazing to copper tubes*

EN 1514-1, *Flanges and their joints — Dimensions of gaskets for PN-designated flanges — Part 1: Non-metallic flat gaskets with or without inserts*

EN 1514-2, *Flanges and their joints — Dimensions of gaskets for PN-designated flanges — Part 2: Spiral wound gaskets for use with steel flanges*

EN 1514-3, *Flanges and their joints — Dimensions of gaskets for PN-designated flanges — Part 3: Non-metallic PTFE envelope gaskets*

EN 1514-4, *Flanges and their joints — Dimensions of gaskets for PN-designated flanges — Part 4: Corrugated, flat or grooved metallic and filled metallic gaskets for use with steel flanges*

prEN 1514-6, *Flanges and their joints — Dimensions of gaskets for PN-designated flanges — Part 6: Covered serrated metal gaskets for use with steel flanges*

prEN 1514-7, *Flanges and their joints — Dimensions of gaskets for PN-designated flanges — Part 7: Covered metal jacketed gaskets for use with steel flanges*

prEN 1514-8, *Flanges and their joints — Dimensions of gaskets for PN-designated flanges — Part 8: Polymeric O-ring gaskets for grooved flanges*

EN 1515-1, *Flanges and their joints — Bolting — Part 1: Selection of bolting*

EN 1515-2, *Flanges and their joints — Bolting — Part 2: Classification of bolt materials for steel flanges, PN designated*

EN 10204, *Metallic products — Types of inspection documents*

ISO 468, *Surface roughness — Parameters, their values and general rules for specifying requirements*

ISO 7005-3:1998, *Metallic flanges — Part 3: Copper alloy and composite flanges*

ANSI/ASTM A105, *Forgings, carbon steel, for piping components*

British Standards Institution (BSI)

BSI is the national body responsible for preparing British Standards and other standards-related publications, information and services.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Copyright in BSI publications

All the content in BSI publications, including British Standards, is the property of and copyrighted by BSI or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use. Save for the provisions below, you may not transfer, share or disseminate any portion of the standard to any other person. You may not adapt, distribute, commercially exploit, or publicly display the standard or any portion thereof in any manner whatsoever without BSI's prior written consent.

Storing and using standards

Standards purchased in soft copy format:

- A British Standard purchased in soft copy format is licensed to a sole named user for personal or internal company use only.
- The standard may be stored on more than 1 device provided that it is accessible by the sole named user only and that only 1 copy is accessed at any one time.
- A single paper copy may be printed for personal or internal company use only.

Standards purchased in hard copy format:

- A British Standard purchased in hard copy format is for personal or internal company use only.
- It may not be further reproduced – in any format – to create an additional copy. This includes scanning of the document.

If you need more than 1 copy of the document, or if you wish to share the document on an internal network, you can save money by choosing a subscription product (see 'Subscriptions').

Reproducing extracts

For permission to reproduce content from BSI publications contact the BSI Copyright & Licensing team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email subscriptions@bsigroup.com.

Rewrites

Our British Standards and other publications are updated by amendment or revision. We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.
